

Makefile for NML-based NewGRFs - Bug #6629

GIT and tags causes odd things to happen.

2013-12-06 22:51 - skyem123

Status:	Resolved	Start date:	2013-12-06
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>When I was building my project I noticed that the command to get the tags only got tags with comments. I changed it so it used "git describe --tags" but I noticed that it still used old tags for the version even when the repository is a newer revision than the tag. Maybe compare the tag given by "git describe --tags" to HEAD?</p>			

History

#1 - 2017-10-07 14:34 - skyem123

- Status changed from New to Resolved

I fixed this for myself on my own makefile just now, however that seems to be a very old version (at least three years old), and from what I can tell from reading this code, it also seems to be fixed here too (around two years ago). In any case, I think it's resolved.
