Description

Since the end of August no Linux builds have been made (as far as I can see). r2095 (end of August) still has the /rpms folder with Linux build, while 4988 (start of September) and later does not. The latest stable releases also don't have the Linux builds.

History

#1 - 2015-04-11 16:12 - frosch

Setup tools also supports building rpms. However it is broken in the python version installed on the compile farm (<https://bugs.python.org/issue13307> was fixed in python 3.4)

In any case, it would only build for x86_64. Cross-compiling would be another story.
